Technical information should always be available to the foremen and mechanics, because their careful and constant adherence to the instructions is essential to ensure vehicle road-worthiness and safety. In addition, the normal basic safety precautions for working on motor vehicles must, as a matter of course, be observed.

satelettronica

01 - Self-diagnosis

1 - Self-diagnosis

1.1 - Self-diagnosis

1.2 - Features of self-diagnosis

The control unit for the Diesel direct injection system is equipped with a fault memory.

If faults occur in the sensors and components being monitored, they will be stored in the fault memory together with an indication of the type of fault.

Faults which only occur sporadically will have the addendum "sporadic fault" on the print out. These faults will be indicated on the display by the addendum "/SP". The cause of sporadic faults can be e.g. a loose contact or a brief open circuit. If a sporadic fault does not occur again within 50 engine starts, it will be erased from the fault memory.

If faults are recognized, that affect the driving condition then the glow period warning lamp flashes.

The faults stored can be read-out with the fault reader V.A.G 1551 or the vehicle system tester V.A.G 1552 => Page 4 .

The fault memory must be erased after the faults has been eliminated => Page 12 .

Note:

General information for self-diagnosis is in the fault reader V.A.G 1551 and the vehicle system tester V.A.G 1552 instruction manuals.

1.3 - Technical data of self-diagnosis

Equipment

- The data transfer between control unit and fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 is carried out in the operating mode "Rapid data transfer".
- Fault memory: Non-volatile memory and volatile memory1)

1) Will be cancelled after 50th engine start if fault has not occurred again.

Interrogating control unit versions

The control unit version is displayed when the fault reader V.A.G 1551 or the vehicle system tester V.A.G 1552 is connected and engine electronics control unit selected => Page 2 .

Selectable functions when using the fault reader V.A.G 1551 or V.A.G 1552

The prerequisites for selecting the desired functions can be taken from the following table.

Protected by copyright. Copyright by Volkswagen AG.
Copyrighted by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelettronica

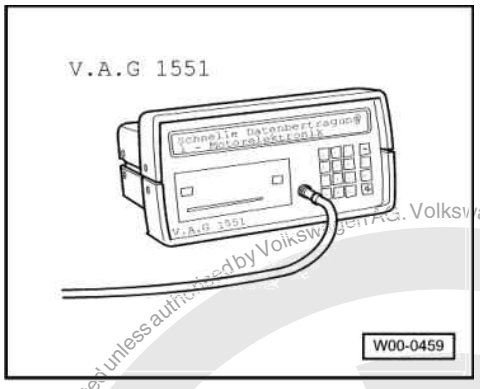
Selectable functions under address word 01, engine electronics

Function		Prerequisite		
Functions on fault reader V.A.G 1551 or on system tester V.A.G 1552		Engine stopped, ignition switched on	Engine running at idling speed	Vehicle being driven
01	Interrogate control unit version	yes	yes	yes
02	Interrogate fault memory	yes1)	yes	yes
03	Final control diagnosis	yes	yes	no
04	Basic setting	no	yes	no
05	Erase fault memory	yes	yes	yes
06	End output	yes	yes	yes
07	Code control unit2)	yes	no	no
08	Read measured value block	yes	yes	yes

1) Only carry out with ignition switched on, when engine does not start.

2) Function not for engine code AEY with MSA12 engine control unit

1.4 - Connecting fault reader V.A.G 1551 and selecting engine electronics control unit

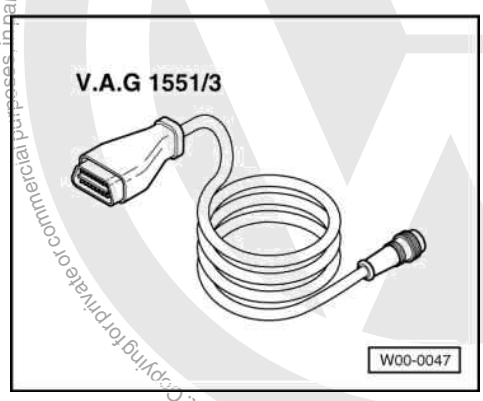


Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- > V.A.G 1551 Fault reader

Note:

The vehicle system tester V.A.G 1552 can be used instead of the fault reader V.A.G 1551, however a print-out is not possible.



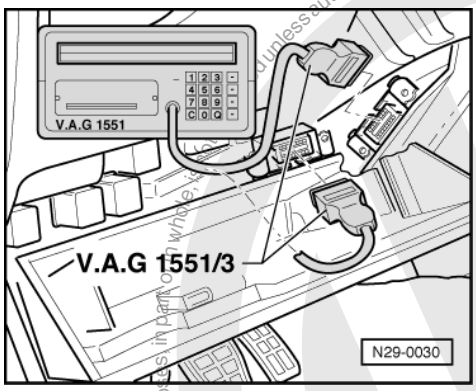
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

satelettronica

- -> V.A.G 1551/3A cable

Test conditions

- Battery voltage OK.



- Fuse 21 OK.
- Earth connections on engine and gearbox OK.

Work sequence

- -> Fold driver's side stowage compartment down.
- Connect fault reader V.A.G 1551 with cable V.A.G 1551/3.

After the fault reader has been connected:

- Depending upon desired function:
  Switch ignition on
  or
  Start engine => Page 1 , Table "Selectable functions".

Notes:

- If the display does not indicate as described in the work sequence:

=> Fault reader operating instructions

- If due to an input fault "Fault in the data transfer!" is displayed, pull wire off fault reader, reconnect and repeat work step.

-> Indicated on display:

```
V.A.G - Self-diagnosis      HELP
1 - Rapid data transfer*
2 - Flash code output*
```

* Appears alternately

- Operate fault reader taking into account the information on the display:
- Press key 1 for "Rapid data transfer".
- Press keys 0 and 1 for address word "Engine electronics" and confirm entry with Q key.

-> The fault reader V.A.G 1551 display will show the control unit identification, e.g.:

```
028906021CQ 1.9 ltr.     R4     EDC SG
     D1V □
Coding 0000      WSC0000
```

- 028906021CQ = Part No. of the control unit (for up-to-date control unit versions see parts catalogue)
- 1.9 ltr./1.7 ltr. = Engine capacity
- R4 = Type of engine (4 Cyl. in-line engine)
- EDC = Injection system (Electronic Diesel Control)
- SG = Gearbox type: manual gearbox
  (AG = automatic gearbox)

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- D1V = Control unit software version
- Coding 00002 coding variant

Coding	For vehicles with
00001	Automatic gearbox
00002	Manual gearbox
00005	Manual gearbox engine code ALE in Caddy

- WSC xxxxx = Workshop code from V.A.G 1551, of the workshops who carried out the last coding. (If the factory coding has not been changed, WSC 00000 appears)

- Press the ⇒key.

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Further measures see repair procedures.

2 - Fault memory

2.1 - Fault memory

2.2 - Interrogating fault memory

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- Fault reader V.A.G 1551 (or vehicle system tester V.A.G 1552) with cable V.A.G 1551/3

Work sequence

- Connect fault reader V.A.G 1551 (V.A.G 1552) and with the "Address word" 01 select the engine electronics control unit. When doing this the engine should be idling.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

Only when engine does not start:

- Switch ignition on.

- Switch on fault reader printer with the print key. The warning lamp in key must light up.

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Operate fault reader taking into account the information on the display:
- Press keys 0 and 2 for function "Interrogate fault memory" and confirm entry with Q key.

-> The number of faults stored or "No fault recognised!" will be shown on the display.

```
X Faults recognised!
```

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

If one or more faults are stored:

The stored faults will be displayed and printed out one after the other.

-> After the stored faults have been printed out, the display will show:

```
Rapid data transfer      HELP
Select function XX
```

The fault reader is required partially for further fault reading therefore leave the engine running and the fault reader connected.

- Locate and eliminate faults printed out as per fault table => Page 5 .
- Afterwards erase fault memory => Page 12

If no fault is stored:

- Press the ⇒key.

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 6 for the "End data transfer" function and confirm input with the Q key.

2.3 - Fault table

Notes:

- The fault tables are listed according to the 5 digit fault code on the left.
- Explanation of the fault types (e.g. "open circuit/short circuit to earth"):

=> Fault reader operating instructions

- If components are indicated as faulty:
  First check the wiring and connectors to these components as well as the system earth connections according to current flow diagram. This is particularly relevant if faults are output as "occurring sporadically" (SP).
- Erase fault memory after rectifying faults.

V.A.G 1551 print-out	Possible causes of fault	Possible effects	Fault remedy
Throttle valve positioner -V60 00282			
Short to positive	- Short to positive - V60 defective/sticking in direction open	- Cold start problems - Cold running problems - Hard load changes - Poor idling characteristics	- Check V60 =>Page 108
Open circuit	- Wiring open circuit		
Open circuit/short to earth	- Wiring open circuit or short to earth - V60 defective

2.4 - Erasing fault memory

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3

Test conditions

- Fault eliminated

Note:

After eliminating faults the fault memory must be interrogated again as follows and then erased.

Work sequence

- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the engine must be running at idling speed.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 2 for function "Interrogate fault memory" and confirm entry with Q key.

```
Rapid data transfer      HELP
Select function XX
```

  -> Press ⇒key until all faults still stored have appeared and the display reads:
- Press keys 0 and 5 for the function "Erase fault memory" and confirm entry with Q key.

-> Indicated on display:

```
Rapid data transfer
Fault memory is erased!
```

- If the fault memory will not erase there is a fault still in the system and this must be rectified.
- Press the ⇒key.

-> Indicated on display:

satelettronica

- Press keys 0 and 6 for the "End data transfer" function and confirm input with the Q key.
- Carry out a road test and interrogate fault memory again. No faults should be shown.

3 - Final control diagnosis

3.1 - Final control diagnosis

3.2 - Performing final control diagnosis

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- Fault reader V.A.G 1551 with cable V.A.G 1551/3

Test requirements for vehicles with air conditioning system

- Vehicle at room temperature (warmer than + 15 °C)
- Air conditioning system switched on
- Select lowest temperature and highest blower speed

The final control diagnosis activates the following components in the stated sequence:

1. Commencement of injection valve (N108)

2. Exhaust gas recirculation valve (N18)

3. Conditioner compressor interruption

4. Engine codes AEY1), AFN, AHU, ALE:
   Fuel cut-off valve (N109)
   Engine codes AEY2), AHB, AKW:
   Throttle valve positioner (V60)

5. Engine code AEY1):
   Throttle valve positioner (V60)
   Engine codes AEY2), AHB, AKW:
   Fuel cut-off valve (N109)
   Engine codes AFN, AHU, ALE:
   Charge pressure limitation solenoid valve (N75)

6. Glow plug relay (J52)

7. Glow period warning lamp (K29)

8. Low heater output relay (J359)

9. High heater output relay (J360)

10. Blower relay (J323)
    (engine code AFN only)

    1) with MSA 12 engine control unit

    2) with MSA 15 engine control unit

Notes:

- Activation of individual control elements is limited to 30 secs. but can be stopped at any time by pressing the ⇒button.

satelettronica

- The ignition must be switched off before repeating the final control diagnosis.

Work sequence

- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the engine must be running at idling speed.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Operate fault reader taking into account the information on the display:
- Press keys 0 and 3 for the function "Final control diagnosis".

-> Indicated on display:

```
Rapid data transfer      Q
03 Final control diagnosis
```

- Confirm input with Q key.

-> Indicated on display:

```
Final control diagnosis
Commencement of injection valve -N108
```

Activating the valve, influences the noise of combustion considerably (pre-ignition).

If no changes in the combustion noises are heard:

- Check injection adjuster control range
  => Page 103
- Press the ⇒key.

-> Indicated on display:

```
Final control diagnosis
Exhaust gas recirculation valve -N18
```

The valve must click.

Notes:

- Because of engine noises the clicking of the valve cannot be heard and therefore must be felt to detect its operation.
- The piston movement of the mechanical exhaust gas recirculation valve is visible in the side slot.

Valve does not click:

- Check exhaust gas recirculation system

Engine codes AEY, AHB, AKW:

=> Repair group 26; Exhaust gas recirculation system, engine codes 1Y, AEY, AHB, AKW; Checking exhaust gas recirculation Exhaust gas recirculation system, engine codes 1Y, AEY, AHB, AKW Checking exhaust gas recirculation

```
Final control diagnosis
Conditioner compressor interruption
```

Air conditioner compressor switch-off is checked.

The test step is also recalled on vehicles without air conditioner system.
The conditioner compressor must stop within 5 secs. (visual check) then start approx. every 5 secs. and then stop.

If the conditioner compressor is not switched off:

- Check conditioner compressor cut-off:

=> Current flow diagrams, Electrical fault finding and Fitting locations binder

- Press the ⇒key.

-> Indicated on display for engine codes AEY (engine control unit MSA 12), AFN, AHU, ALE:

```
Final control diagnosis
Fuel cut-off valve -N109
```

The engine must stop.

If the engine does not stop:

- Switch off ignition.
- Unscrew fuel cut-off valve and remove any metal particles or dirt.
- Repeat final control diagnosis and if the engine will not stop replace fuel cut-off valve => Fitting locations overview, Page 46 .
- Continue final control diagnosis with engine stopped and ignition switched on.
- Press the ⇒key.

-> Indicated on display for engine codes AEY (MSA 15 engine control unit), AHB, AKW:

```
Final control diagnosis
Throttle valve positioner-V60
```

The solenoid valve must click.

Note:

The clicking of the valve is difficult to hear and is therefore best checked by touch.

If the valve does not click:

- Check throttle valve positioner (V60) => Page 108 .
- Press the ⇒key.

-> Indicated on display for engine code AEY (MSA 12 engine control unit):

```
Final control diagnosis
Throttle valve positioner-V60
```

The solenoid valve must click.

Note:

The clicking of the valve is difficult to hear and is therefore best checked by touch.

If the solenoid valve does not click:

- Check throttle valve positioner (V60) => Page 108 .
- Press the ⇒key.

-> Indicated on display for engine codes AEY (MSA 15 engine control unit), AHB, AKW:

Display group 013 at idling speed (engine warm, coolant temperature not below 80 °C)

Display group 013 -Idling speed smooth running control-						
Read measured value block 13 x.xx mg/H x.xx mg/H x.xx mg/H			⇒	[Itrif] Indicated on display		
1	2	3	4	[Itrif] Display zones	Specification	Evaluation
				No display		---
			Different quantity injected Cyl.1 and Cyl. 3		- 2.0...+ 2.0 mg/H	=> Page 23
		Different quantity injected Cyl. 2 and Cyl. 3			- 2.0...+ 2.0 mg/H	=> Page 23
	Different quantity injected Cyl. 4 and Cyl. 3				- 2.0...+ 2.0 mg/H	=> Page 23

Evaluation: Idling speed smooth running control display

The injection system is equipped with an idling speed smooth running control. There may be power differences between the individual cylinders (component tolerances, jet drillings, compressions etc.) which are recognised and equalized via selective injected quantities.
Recognition at idling speed is via the signal from the engine speed sender which delivers four signals per crankshaft revolution to the control unit. If the signals are delivered at the same rhythm then all cylinders work the same. If one cylinder is weaker then the crankshaft takes longer for the next half revolution. Conversely a more powerful cylinder accelerates the crankshaft so less time is taken.
If the control unit recognises a difference, then the relevant cylinder is given more or less fuel, until the engine runs evenly again.
The measured value block displays the injected quantity differences of the individual cylinders compared with No. 3 cylinder that is required to ensure an even engine idling speed.
+... mg/H: The relevant cylinder is less powerful than No. 3 cylinder and is therefore supplied with more fuel.
-... mg/H: The relevant cylinder is more powerful than No. 3 cylinder and is therefore supplied with less fuel.

Display group 000 at full throttle (test drive in 3rd gear, coolant temperature not below 80 °C)

Notes:

- When testing, accelerate vehicle at full throttle.
- The measured values must be printed out or read (2nd person required) when the revolutions reach 3,000 rpm.

Large deviation from ambient temperature	- Short circuit or coolant temperature sender -G62 defective	- Check G62 => Page 78 If a fault is present the fuel temperature is displayed alternatively

Display group 013 at idling speed (engine warm, coolant temperature not below 80 °C)

Engine code AHB

Display group 013 -Idling speed smooth running control-						
Read measured value block 13 x.xx mg/H x.xx mg/H x.xx mg/H			⇒	[Itrif] Indicated on display		
1	2	3	4	[Itrif] Display zones	Specification	Evaluation
				No display		---
			Different quantity injected Cyl. 1 and Cyl. 3		- 2.0...+ 2.0 mg/H	=> Page 30
		Different quantity injected Cyl. 2 and Cyl. 3			- 2.0...+ 2.0 mg/H	=> Page 30
	Different quantity injected Cyl. 4 and Cyl. 3				- 2.0...+ 2.0 mg/H	=> Page 30

Evaluation: Idling speed smooth running control display

The injection system is equipped with an idling speed smooth running control. There may be power differences between the individual cylinders (component tolerances, jet drillings, compressions etc.) which are recognised and equalized via selective injected quantities.
Recognition at idling speed is via the signal from the engine speed sender which delivers four signals per crankshaft revolution to the control unit. If the signals are delivered at the same rhythm then all cylinders work the same. If one cylinder is weaker then the crankshaft takes longer for the next half revolution. Conversely a more powerful cylinder accelerates the crankshaft so less time is taken.
If the control unit recognises a difference, then the relevant cylinder is given more or less fuel, until the engine runs evenly again.
The measured value block displays the injected quantity differences of the individual cylinders compared with No. 3 cylinder that is required to ensure an even engine idling speed.
+... mg/H: The relevant cylinder is less powerful than No. 3 cylinder and is therefore supplied with more fuel.
-... mg/H: The relevant cylinder is more powerful than No. 3 cylinder and is therefore supplied with less fuel.

	Different quantity injected Cyl. 4 and Cyl. 3				- 2.0...+ 2.0 mg/H	=> Page 39

Evaluation: Idling speed smooth running control display

The injection system is equipped with an idling speed smooth running control. There may be power differences between the individual cylinders (component tolerances, jet drillings, compressions etc.) which are recognised and equalized via selective injected quantities.
Recognition at idling speed is via the signal from the engine speed sender which delivers four signals per crankshaft revolution to the control unit. If the signals are delivered at the same rhythm then all cylinders work the same. If one cylinder is weaker then the crankshaft takes longer for the next half revolution. Conversely a more powerful cylinder accelerates the crankshaft so less time is taken.
If the control unit recognises a difference, then the relevant cylinder is given more or less fuel, until the engine runs evenly again.
The measured value block displays the injected quantity differences of the individual cylinders compared with No. 3 cylinder that is required to ensure an even engine idling speed.
+... mg/H: The relevant cylinder is less powerful than No. 3 cylinder and is therefore supplied with more fuel.
-... mg/H: The relevant cylinder is more powerful than No. 3 cylinder and is therefore supplied with less fuel.

Display group 015

1 - Servicing Diesel direct injection system

1.1 - Servicing Diesel direct injection system

Diesel is drawn from the fuel tank by the distributor injection pump, pressurised, and then sprayed into the combustion chamber onto the crown of the piston by the injector.

The quantity injected is regulated electronically by the Diesel direct injection system control unit. The electronic regulation allows the quantity injected and the injection characteristics, commencement of injection and exhaust gas recirculation, to be regulated flexibly to meet requirements.

The Diesel direct injection system control unit is equipped with a fault memory. Before starting repairs, adjustments and fault finding, the fault memory must be interrogated and final control diagnosis completed =>Page 4 .

Note:

When performing check and adjustment operations the control unit may recognized and store faults.

For this reason after completing all check and adjustment operations it is necessary to erase fault memory

=>Page 12 .

1.2 - Safety precautions

To prevent injuries to persons and/or damage to the injection and glow plug system, the following must be noted:

- The ignition must be switched off before connecting or disconnecting injection or glow plug system wiring or tester cables.
- If the engine is to be turned at starter speed, without starting, e.g. when checking compressions, pull connector off fuel cut-off valve (N109) on injection pump.
- Before disconnecting battery, obtain radio code for radios fitted with anti-theft coding.
- Disconnecting and connecting the battery must only be undertaken when the ignition switched off otherwise the Diesel direct injection system control unit may be damaged.

Observe following if test and measuring instruments are required during a test drive:

- Test and measuring instruments must be secured to rear seat and operated by a 2nd person from this location.

  If test and measuring instruments are operated from front passenger's seat and the vehicle is involved in an accident, there is a possibility that the person sitting in this seat may receive serious injuries when the airbag is triggered.

1.3 - Rules for cleanliness

When working on the fuel supply/injection system, pay careful attention to the following "5 rules":

- Thoroughly clean all unions and the adjacent areas before disconnecting.
- Place parts that have been removed on a clean surface and cover. Do not use fluffy cloths!
- Carefully cover opened components or seal, if the repair cannot be carried out immediately.

satelettronica

- Only install clean components:
  Only unpack replacement parts immediately prior to installation.
  Do not use parts that have been stored loose (e.g. in tool boxes etc.).
- When the system is open:
  Do not work with compressed air if this can be avoided.
  Do not move vehicle unless absolutely necessary.
- Also ensure that no Diesel fuel runs onto the coolant hoses. If necessary hoses must be cleaned immediately. Affected hoses must be replaced.

1.4 - Fitting locations overview

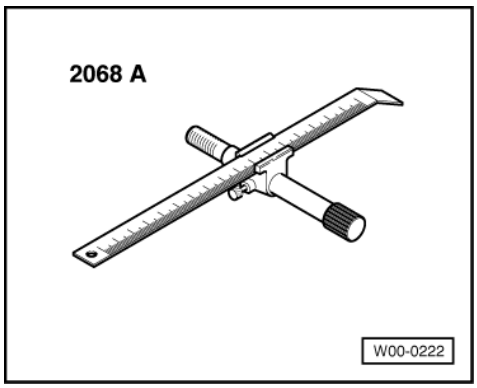
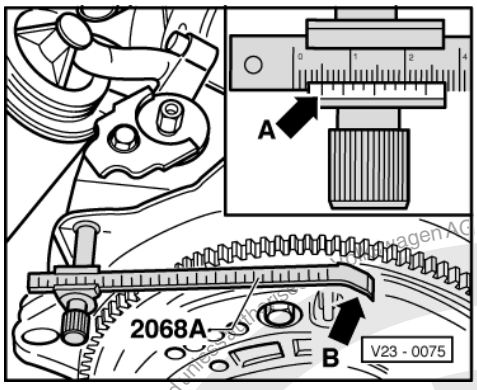
1.6 - Setting engine to number 1 cylinder with engine removed

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required



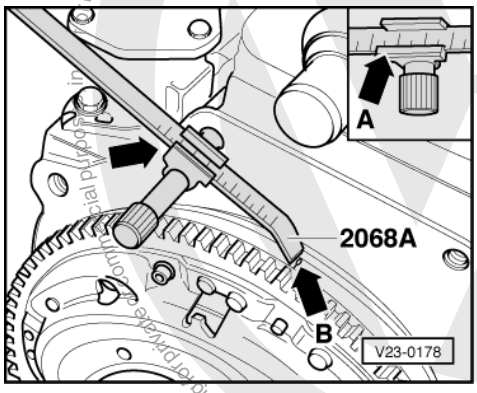
- -> 2068 A Setting device

Work sequence



Engine codes AEY, AHB, AKW

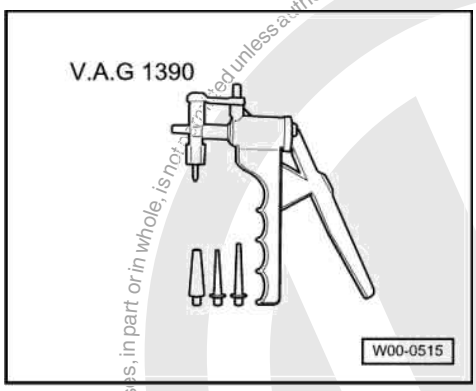
- -> Attach adjusting tool as shown.
- Set adjusting tool to 5.0 mm. The reference point is the graduation mark on the left of the vernier scale - arrow A-.
- Turn crankshaft until TDC mark on the flywheel is aligned with the tip of the adjusting tool -arrow B-.



satelettronica
Protected by copyright. Copyright by Volkswagen AG.
Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document.

Engine codes AFN, AHU, ALE
- -> Attach adjusting tool as shown.
- Set adjusting tool to 96.0 mm. The reference point is the graduation mark on the left of the vernier scale - arrow A-.
- Turn crankshaft until TDC mark on the flywheel is aligned with the tip of the adjusting tool -arrow B-.

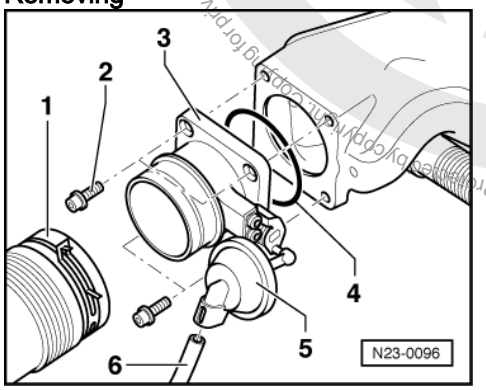
1.7 - Checking throttle valve positioner housing



At low engine speeds the vacuum in the intake manifold is not sufficient to ensure correct functioning of the exhaust gas recirculation system. Therefore to increase vacuum the throttle valve remains closed up to 2200 rpm after starting the engine.

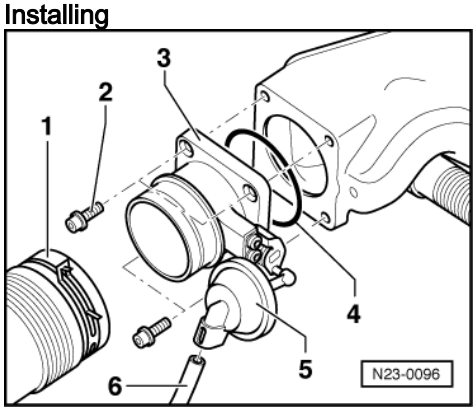
Special tools, workshop equipment, testers, measuring instruments and auxiliary items required
- -> Hand vacuum pump V.A.G 1390
- Torque wrench V.A.G 1331 (5...50 Nm)

Removing



- -> Remove intake hose -1-.
- Pull vacuum hose -6- off vacuum unit -5-.
- Unscrew securing bolts -2- and remove throttle valve housing -3- with O ring -4-.

Installing



satelettronica

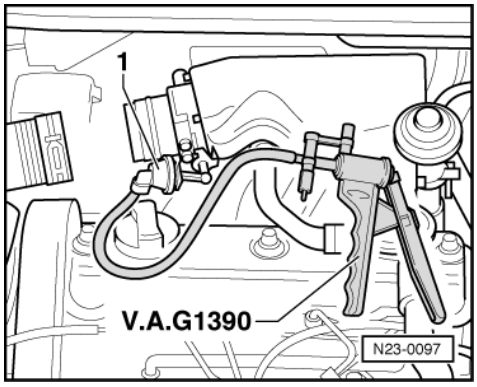
- Attach throttle valve housing with O ring to intake manifold and tighten securing bolts to 10 Nm.

Note:

Renew O ring if damaged.

- -> Attach vacuum hose -6- and install intake hose -1-.

Functional check of vacuum unit



- -> Connect vacuum pump V.A.G 1390 to vacuum unit -1- and create a vacuum.

Specification:
The throttle valve must close up to stop and remain closed.

If the specification is not attained:

- Renew vacuum unit.

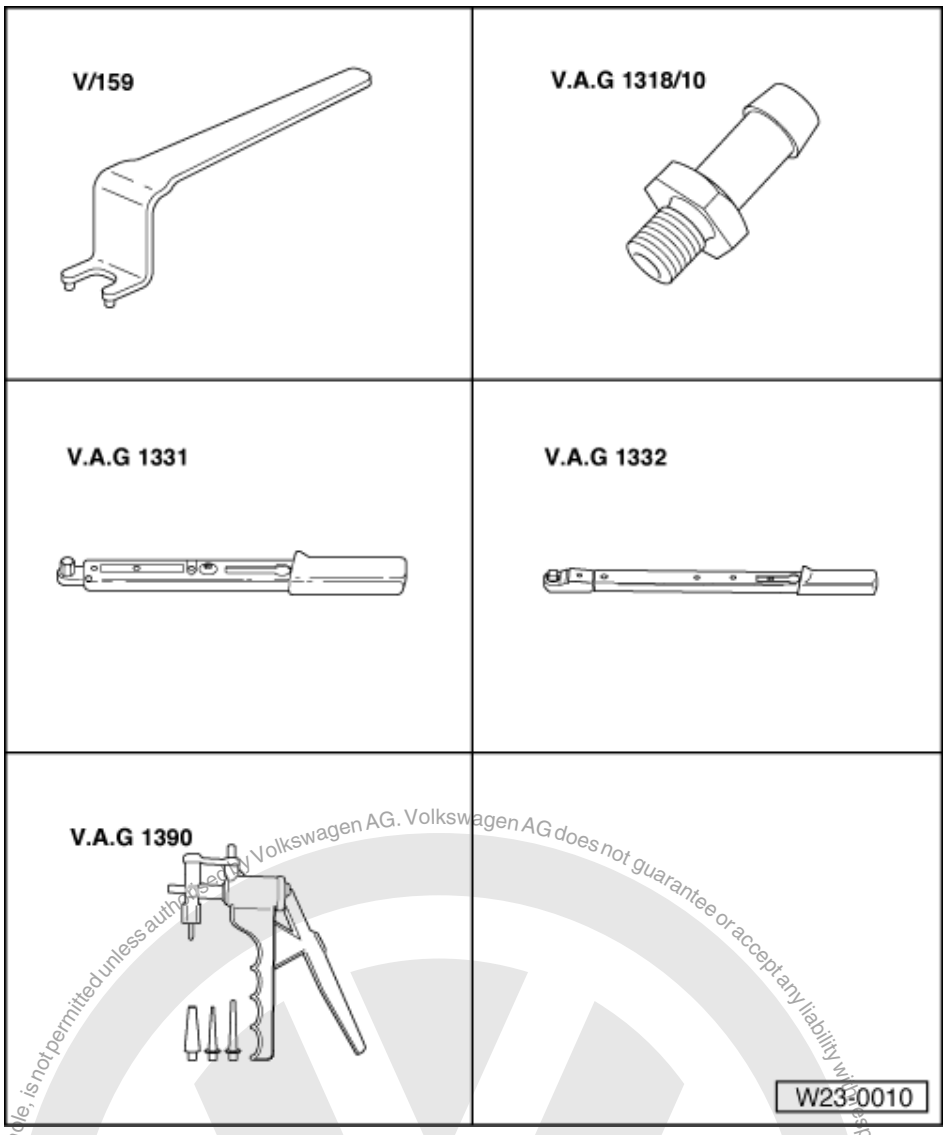
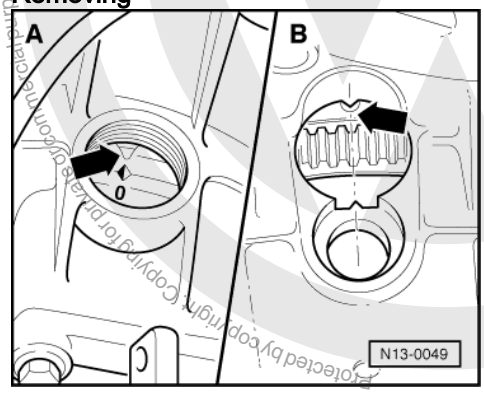
- 3036 Retainer

satelettronica



- V159 Pin wrench
- V.A.G 1318/10 Adapter hose
- V.A.G 1331 Torque wrench (5...50 Nm)
- V.A.G 1332 (40...200 Nm) Torque wrench
- V.A.G 1390 Hand vacuum pump

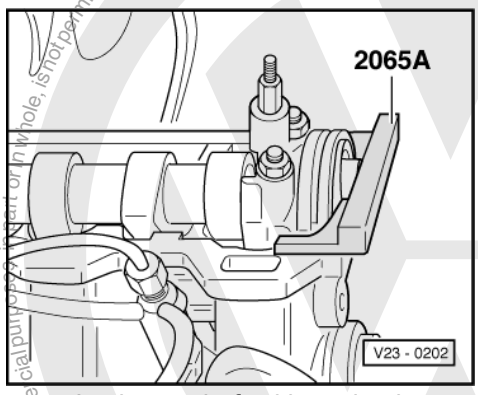
Removing



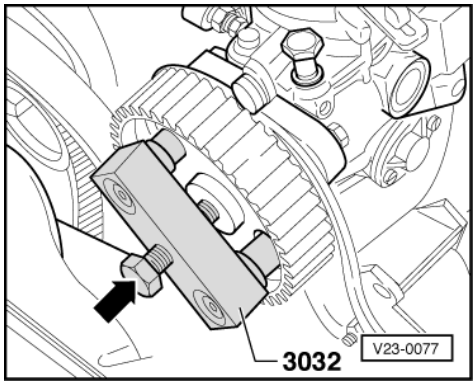
- Remove air cleaner.
- Remove upper toothed belt guard.
- Remove cylinder head cover.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- -> Turn crankshaft to TDC No. 1 cylinder -arrow-.



- -> Lock camshaft with setting bar.
- Centralize setting bar as follows:
  Turn arrested camshaft so that one end of setting bar contacts the cylinder head. Using feeler gauge establish the gap at the other end of the setting bar. Place a feeler gauge corresponding to half the gap between setting bar and cylinder head. Turn camshaft until the setting bar contacts the feeler gauge. Place a 2nd feeler gauge, of same thickness, at the other end between setting bar and cylinder head.
- Remove idler roller.
- Remove tensioning roller nut.
- Relieve tooth belt tension and take off camshaft and injection pump sprockets.
- Lock injection pump sprocket with pin 2064.
- Remove injection pump sprocket securing nut.

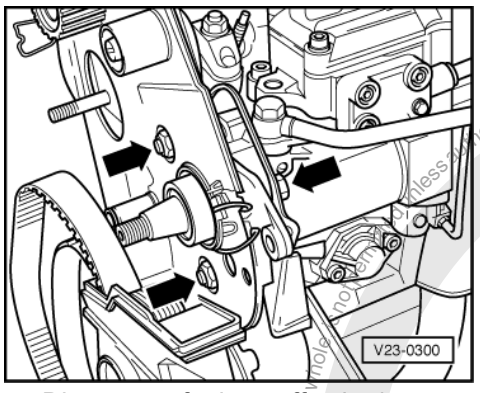


- -> Loosen puller arms and offer up.
- Locate puller arms through holes in injection pump sprocket and tighten.
- Place injection pump sprocket under tension with puller.
- Release injection pump sprocket from injection pump taper by tapping lightly on puller spindle -arrow- (when doing this hold sprocket so that it does not fall off).
- Unbolt all fuel lines at fuel pump.
- Cover openings with a clean cloth.

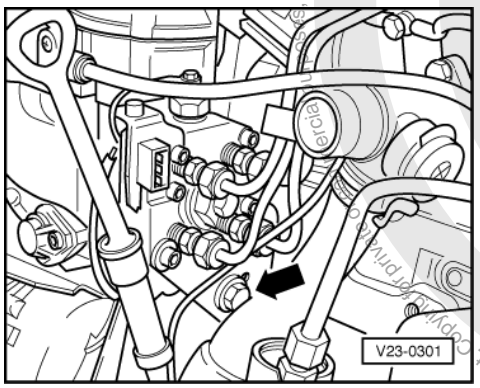
Note:

Use slotted ring spanner 3035 to remove high pressure fuel pipes.

satelettronica



- Disconnect fuel cut-off valve/commencement of injection valve connector.
- Disconnect quantity adjuster connector and unclip connector from retainer.
- -> Remove securing bolts from console -arrows-.



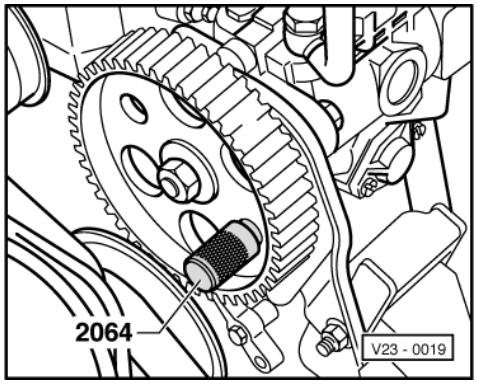
- -> Then remove bolt from rear support -arrow-.
- Take off injection pump.

Installing

- Insert injection pump into console and then tighten securing bolt on rear support with conical nut first.
- Align injection pump to central position in console elongated holes and secure hand tight.

Note:

The commencement of injection is set dynamically with V.A.G 1551.



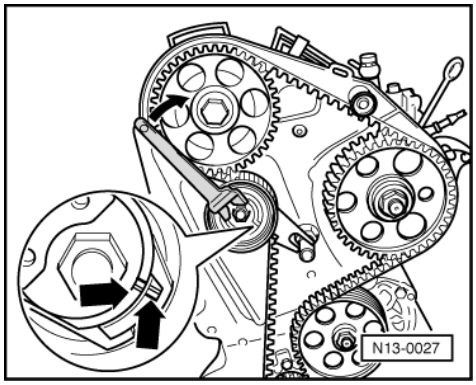
- -> Install injection pump sprocket and lock in position with pin 2064. When installing observe spring washer seating.
- Tighten securing nut to 55 Nm.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Note:

Never use setting bar as a counter hold when loosening and tightening the camshaft sprocket, use retainer 3036.

- Loosen camshaft sprocket securing bolt a half turn.
- Place a drift through hole in the rear of the toothed belt guard and release the camshaft sprocket from camshaft taper with a blow from a hammer.
- Take camshaft sprocket off.
- Check whether TDC mark on flywheel and reference mark are aligned.
- Place tooth belt on injection pump sprocket and tensioning roller.
- Fit camshaft sprocket into toothed belt and secure sprocket so that the camshaft can still turn.
- Install idler roller.
- Remove locking pin from injection pump sprocket.



- -> Tension toothed belt. Using pin wrench (e.g. Matra V159) on eccentric turn clockwise until the notch and the raised mark -arrows- align.

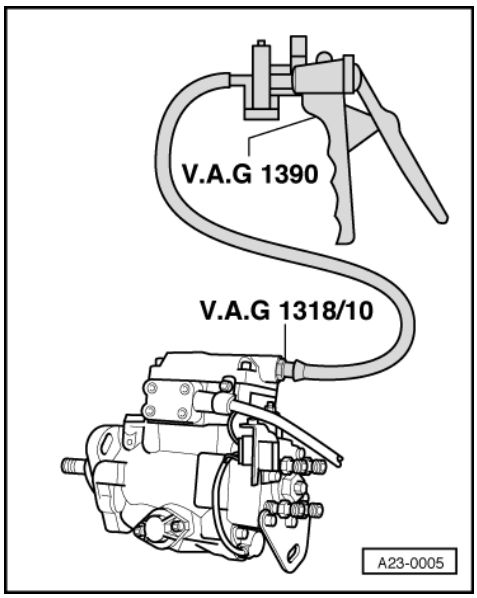
Note:

If the eccentric has been turned too far the tensioning roller must be relieved completely and retensioned. The eccentric must never be turned back when it has been turned too far.

- Tighten securing nut to 20 Nm.
- Check TDC mark on flywheel again.
- Tighten camshaft sprocket securing bolt to 45 Nm.
- Remove setting bar 2065A from camshaft.
- Turn crankshaft two rotations in engine D.O.R. until crankshaft is set to TDC No. 1 cylinder again.
- Check if
  - the TDC mark on flywheel
  - the setting bar on camshaft
  - the pin 2064 in injection pump sprocket
  - the tensioning roller setting (notch/raised mark)

  align/are fitted correctly.
- If notch and raised mark do not align, tension the tensioning roller. To do this, hold tensioning roller with pin wrench Matra V159, loosen securing nut, turn eccentric clockwise further until notch and raised mark align opposite one another and tighten securing nut to 20 Nm.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



- Turn crankshaft two rotations in engine D.O.R. until crankshaft is set to TDC No. 1 cylinder again.
- Repeat check.
- Reconnect injection pipes, fuel pipes and electrical wiring.

-> Fill injection pump with Diesel as follows.

- Screw adapter 1318/10 into injection pump return supply opening.
- Connect hand vacuum pump 1390 with approx. 1 m transparent plastic hose to adapter.
- Operate vacuum pump until fuel flows out of return supply opening. Do not draw fuel into vacuum pump.
- Remove adapter and connect return supply pipe.
- Install toothed belt guard, cylinder head cover and air cleaner.
- Dynamically check commencement of injection and adjust if necessary =>Page 66.

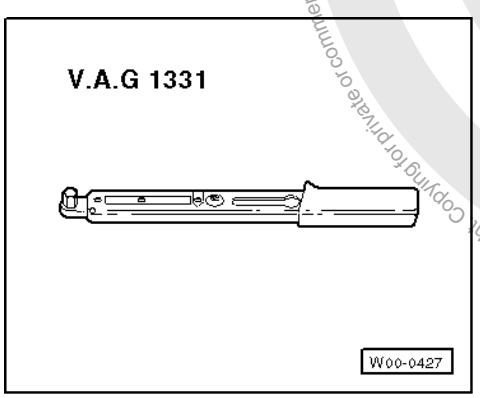
1.9 - Dynamically checking and adjusting commencement of injection

Notes:

- Dynamically checking and correcting commencement of injection is only possible in function 04 "Engine basic setting".
- The commencement of injection must always be checked after renewing the toothed belt or loosening the injection pump bolts or toothed belt sprockets and if necessary adjusted.

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3



satelettronica
Protected by copyright. Copying for private or commercial purposes, part or on whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

- -> V.A.G 1331 Torque wrench (5...50 Nm)

Checking and adjustment conditions
- Mechanical engine basic setting OK.
- Toothed belt tension OK.

Work sequence
- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the engine must be running at idling speed.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 4 for the function "Introduction of basic setting" and confirm entry with Q key.

-> Indicated on display:

```
Basic setting      HELP
Input display group number XXX
```

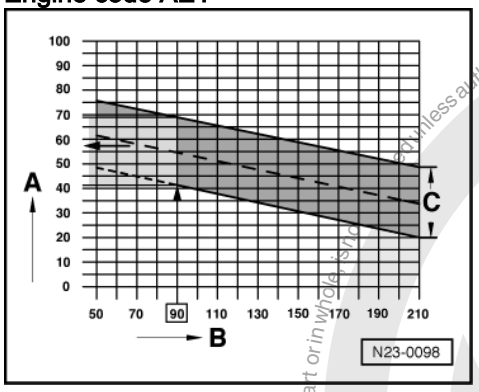
- Press key 0 three times for "Display group number 0" and confirm entry with Q key.

-> Indicated on display:
(1...10 = Display zones)

```
System in basic setting 0
     1     2     3     4     5     6
7     8     9     10
```

The commencement of injection in display zone 2 is dependent on the fuel temperature in display zone 9.

Engine code AEY



-> A - Display zone 2 commencement of injection
B - Display zone 9 fuel temperature
C - Specified range for commencement of injection

Example:
The numerical value 90 in display zone 9 (B) corresponds to a numerical value range of 42...69 in display zone 2 (A).

Engine codes AHB, AKW

Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

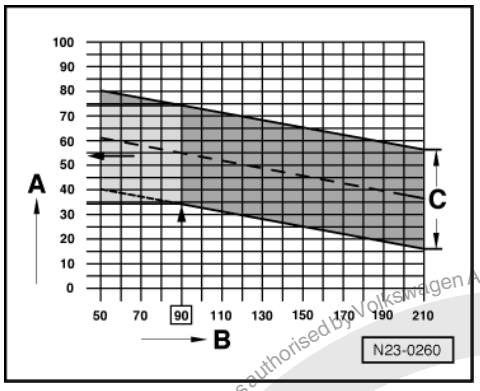
-> A - Display zone 2 commencement of injection
B - Display zone 9 fuel temperature
C - Specified range for commencement of injection

Example:

The numerical value 90 in display zone 9 (B) corresponds to a numerical value range of 41...80 in display zone 2 (A).

Engine codes AFN, AHU, ALE



-> A - Display zone 2 commencement of injection
B - Display zone 9 fuel temperature
C - Specified range for commencement of injection

Example:

The numerical value 90 in display zone 9 (B) corresponds to a numerical value range of 34...74 in display zone 2 (A).

Continued for all engine codes

Notes:

- If the commencement of injection is advanced turn injection pump in engine direction of rotation, if the commencement of injection is retarded turn against direction of rotation.
- If when checking the commencement of injection the specifications are within zone -C- then no adjustment is required. After repairs e.g. removing and installing injection pump, adjusting timing then the commencement of injection is to be set to the mean valve (dashed line) of specification zone -C-.

- Loosen injection pump securing bolts approx. one turn, leaving the easiest bolt to reach till last.
- Hold injection pump by hand under tension in direction to be adjusted.
- Carefully loosen last securing bolt until the pump can be turned slightly and then retighten securing bolt.
- Observe figures in zone 2 and if necessary adjust again until the mean value for specification zone -C- is displayed.
- Tighten injection pump securing bolts to 25 Nm.
- Check commencement of injection again.
- Press the ⇒key.
- Press keys 0 and 6 for the "End data transfer" function and confirm input with the Q key.

Note:

Loosen and re-tighten (25 Nm) the injection pipes on the injection pump after dynamically adjusting the injection pump. This relieves the strain on pipes and prevents vibration breakages.

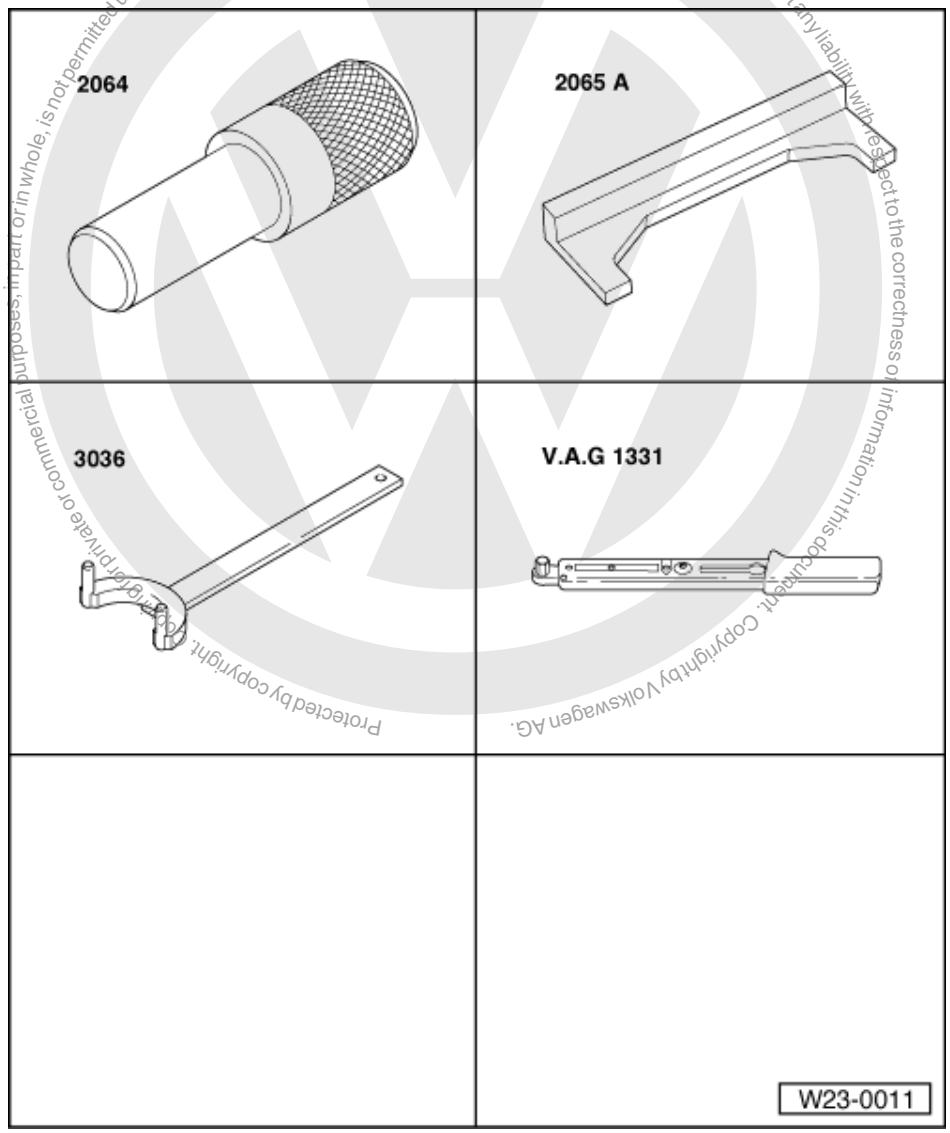
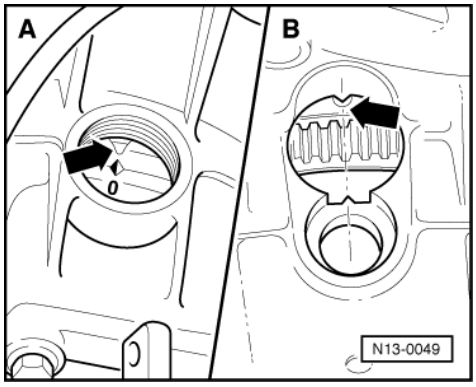
1.10 - Checking valve timing



Special tools, workshop equipment, test and measuring appliances and aux. items required

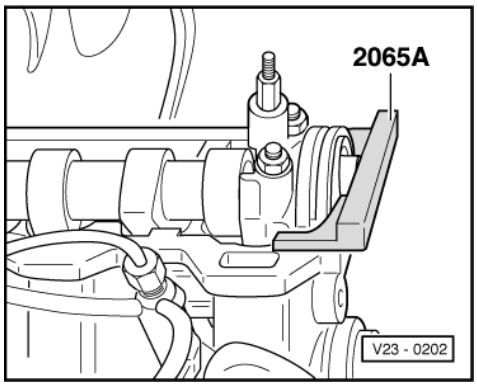
- 2064 Locking pin
- 2065 A Setting bar
- 3036 Retainer
- V.A.G 1331 Torque wrench (5...50 Nm)



satelettronica

Work sequence

- Remove upper toothed belt guard and cylinder head cover.
- Check tension of toothed belt.
- -> Turn crankshaft to TDC No. 1 cylinder -arrow-.

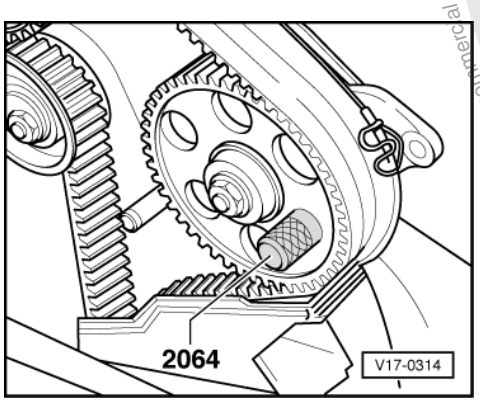


- -> Setting bar must fit into the slot in the camshaft. If it is not possible to insert the bar, adjust valve timing as follows.
- Rotate camshaft so that setting bar can be inserted.
- Centralize setting bar as follows:
  Turn arrested camshaft so that one end of setting bar contacts the cylinder head. Using feeler gauge establish the gap at the other end of the setting bar. Place a feeler gauge corresponding to half the gap between setting bar and cylinder head. Turn camshaft until the setting bar contacts the feeler gauge. Place a 2nd feeler gauge, of same thickness, at the other end between setting bar and cylinder head.

Note:

Never use setting bar as a counter hold when loosening and tightening the camshaft sprocket, use retainer 3036.

- Loosen camshaft sprocket securing bolt a half turn.
- Place a drift through hole in the rear of the toothed belt guard and release the camshaft sprocket from camshaft taper with a blow from a hammer.



- -> Lock injection pump sprocket with pin 2064.
- Check crankshaft TDC setting. The TDC marking on the flywheel and the casting on the clutch bell housing must align.
- Remove locking pin.
- Tighten camshaft sprocket securing bolt to
  45 Nm.
- Remove setting bar.
- Install toothed belt guard and cylinder head cover.
- Dynamically check commencement of injection=>Page 66 .

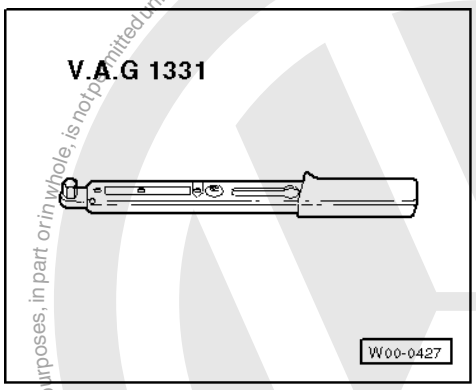
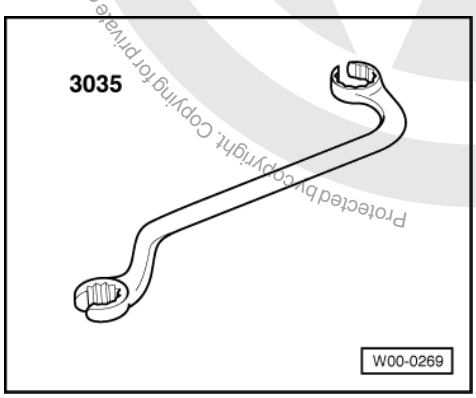
1.11 - Removing and installing injectors



Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- -> V.A.G 1331 Torque wrench (5...50 Nm)



- -> 3035 Ring spanner

Note:

Defective injectors cause the following faults:

- Misfiring
- Knocking in one or more cylinders
- Engine over-heating
- Loss of power
- Excessive black exhaust smoke
- Higher fuel consumption
- Excessive blue smoke when starting from cold

Defective injectors can be located by loosening the high pressure pipe union on each injector in turn with the engine running at a fast idling speed. If engine speed remains constant after loosening a pipe union, this indicates a defective injector.

Removing

- Remove injection pipes with an slotted ring spanner 3035.

Note:

Always remove pipe set complete. Do not alter pipe shape.

- Remove securing nut, take off retainer and take out injector.

satelettronica

Installing

Note:

Always renew heat insulating seal between cylinder head and injectors.

- Insert injector.
- Check mounting is seated correctly in cylinder head.
- Fit retainer.

Tightening torques:
Injection pipes = 25 Nm
Retainer nut = 20 Nm

1.12 - Servicing injectors

This engine is equipped with dual spring injectors. The fuel injected therefore occurs in 2 stages.
If faults occur with these injectors then they are to be exchanged as neither servicing nor pressure setting is possible.

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

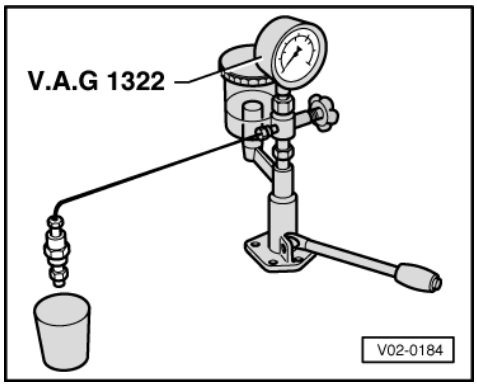
- Injector test unit V.A.G 1322 with pressure pipe V.A.G 1322/2

Test conditions

- Pressure gauge on

Checking injection pressure

Warning!
When testing injectors ensure that the jet of fuel does not contact the hands as the high pressure will cause the fuel to penetrate the skin and may cause severe injuries.



- -> Connect injector to injector test unit.
- Press pump lever down slowly. When spray begins, read off opening pressure. For deviations from specification renew injector.

Engine codes AEY, AFN, AHB, AHU, AKW

Specification:
New injectors: 190 ... 200 bar
Wear limit: 170 bar

Engine code ALE

Specification:

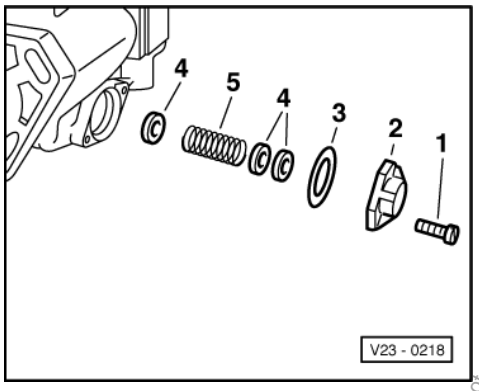
satelettronica

New injectors: 220 ... 230 bar
Wear limit: 200 bar

Checking for leaks

- Move pump lever down slowly and maintain a pressure of approx. 150 bar for 10 seconds. No fuel should leak from the nozzle tip.
- If injector leaks, replace.

1.13 - Renewing injection timing device cover O-ring



- Place a clean cloth under the injection pump.
- -> Remove cover screws -1- with commercially available key for Torx socket head screws, e.g. Hazet 2115-T30.
- Remove cover -2- and clean it.
- Renew O-ring -3- and install cover with existing shims -4-.

2 - Checking components and functions

2.1 - Checking components and functions

2.2 - Checking Diesel direct injection system voltage supply

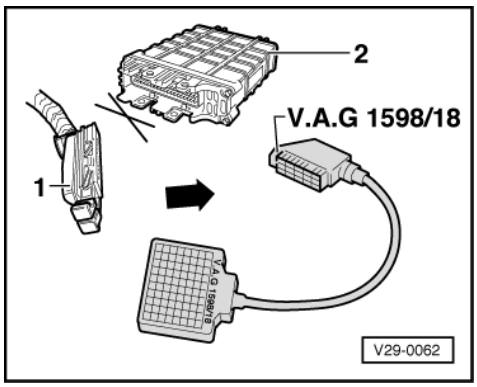
Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- Test box V.A.G 1598/18 or V.A.G 1598/22
- Hand multimeter V.A.G 1526 or multimeter V.A.G 1715
- Adapter set V.A.G 1594
- Current flow diagram

Test prerequisites:

- Battery voltage OK.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



Test sequence

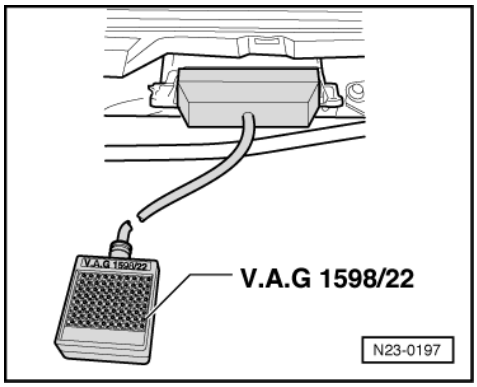
- Switch off ignition.

Vehicles with 68-pin control unit

- -> Connect test box V.A.G 1598/18 to control unit wiring loom.
- Bridge sockets 42+46 with auxiliary cables from V.A.G 1594.

- Measure voltage between following sockets:
  45+1, 68+1, 23+1 and 23+24
  Specification: approx. battery voltage

Vehicles with 80-pin control unit



- -> Connect test box V.A.G 1598/22 to control unit wiring loom.
- Bridge sockets 33+1 with auxiliary cables from V.A.G 1594.
- Measure voltage between following sockets:
  2+1, 28+1, 27+2 and 28+27
  Specification: approx. battery voltage

Continued for all vehicles

If the specification is not obtained:

- Check voltage supply relay terminal 30 (J317).
- Check wiring connections for open circuit, short circuit and transfer resistance at contacts according to current flow diagram.

If no fault is found in wiring and relay:

- Renew Diesel direct injection system control unit (J248) => Page 117 .

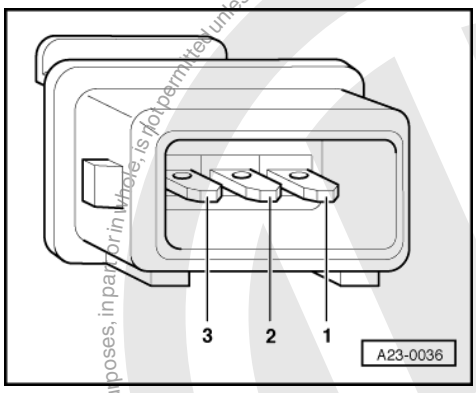
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

2.3 - Checking engine speed sender

The engine speed sender is speed and reference mark sender. During failure the engine continues running in an emergency programme. Replacement sender is needle lift sender -G80.

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- Test box V.A.G 1598/18 or V.A.G 1598/22
- Hand multimeter V.A.G 1526 or multimeter V.A.G 1715
- Adapter set V.A.G 1594
- Current flow diagram

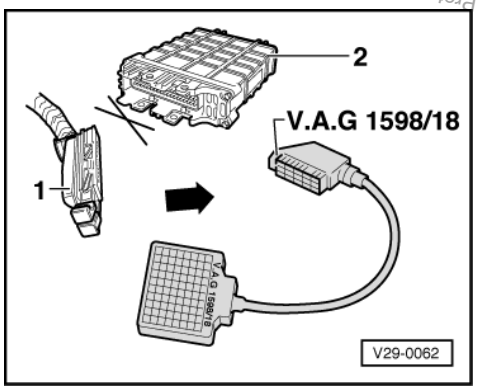


Test sequence

- Switch off ignition.
- Disconnect connector for engine speed sender.
  =>Fitting location overview, Page 46 .
- -> Measure resistance between connector contacts 1+2.
  Specification: 1.0 ... 1.5 kω

If the specification is not obtained:

- Renew engine speed sender -G28.



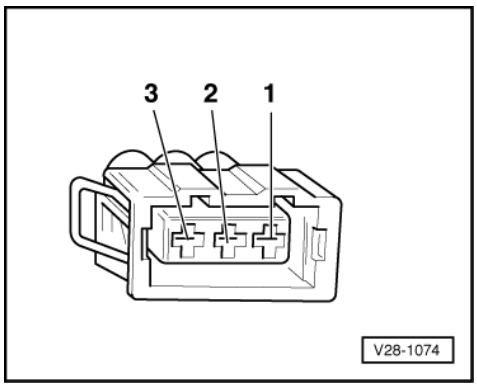
=> Repair group 13; Dismantling and assembling engine Dismantling and assembling engine

If the specification is obtained:

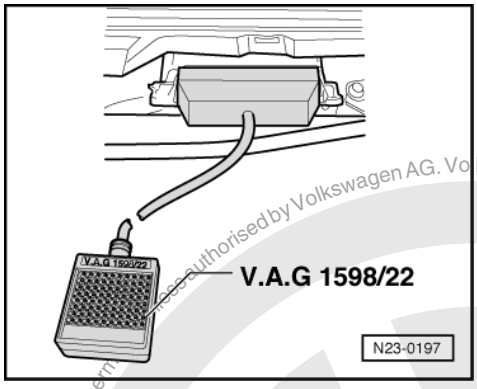
Vehicles with 68-pin control unit

- -> Connect test box V.A.G 1598/18 to control unit wiring loom.

Protected by copyright. Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. Reproduction for commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelettronica

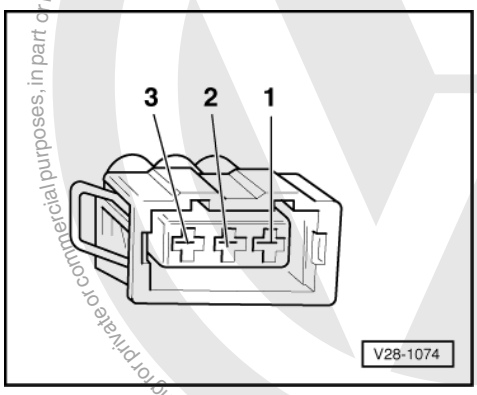


- -> Check wiring between test box and 3 pin connector for open circuit according to current flow diagram.
  Contact 1+ socket 33
  Contact 2+ socket 8
  Contact 3+ socket 1
  Wire resistance: max. 1.5 ω
- Check wiring at 3 pin connector for short circuit to one another according to current flow diagram.
  Specification: ∞ω



Vehicles with 80-pin control unit

- -> Connect test box V.A.G 1598/22 to control unit wiring harness.



- -> Check wiring between test box and 3 pin connector for open circuit according to current flow diagram.
  Contact 1+ socket 69
  Contact 2+ socket 67
  Contact 3+ socket 71
  Wire resistance: max. 1.5 ω
- Check wiring at 3 pin connector for short circuit to one another according to current flow diagram.
  Specification: ∞ω

satelettronica
Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. Transmitted or reproduced for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.

Continued for all vehicles

If no wiring fault is detected:

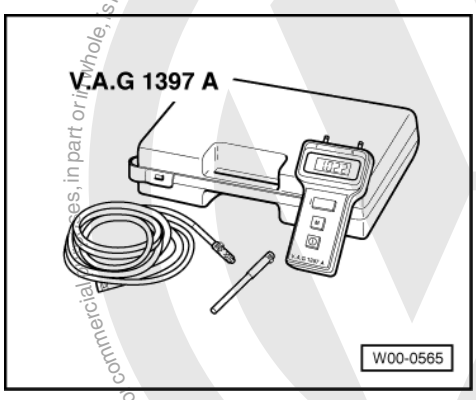
- Renew Diesel direct injection system control unit (J248) => Page 117 .

2.4 - Checking intake manifold pressure sender and altitude sender

(Only engine codes AFN, AHU, ALE)

Both pressure senders are located in the Diesel direct injection system control unit.

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required



- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3
- -> V.A.G 1397 A Turbocharger tester

Test sequence

- Connect the fault reader V.A.G 1551 (V.A.G 1552) and with ignition switched on select engine electronics control unit with the "Address word" 01.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 8 for the function "Read measured value block" and confirm entry with Q key.

-> Indicated on display:

```
Read measured value block      HELP
Input display group number XXX
```

- Press keys 0, 1 and 0 for "Display group number 10" and confirm entry with Q key.

-> Indicated on display:

```
Read measured value block 10
0 mg/H      1027 mbar      1013 mbar      0
%
```

- Compare display in display zone 2 (altitude sender -F96) and display zone 3 (intake manifold pressure sender -G71).

Specification: Pressures the same
(Tolerance ±30 mbar)

satelettronica

If the specification is not obtained:

- Compare pressure display with a barometer (e.g. turbocharger test unit V.A.G 1397/A).
  Tolerance ±30 mbar

Value in display zone 3 deviates:

- Pull pressure hose off control unit.

Value in display zone 3 still deviates:

- Press the ⇒key.
- Press keys 0 and 6 for the "End data transfer" function and confirm input with the Q key.
- Switch off ignition.
- Renew Diesel direct injection system control unit (J248) => Page 117 .

2.5 - Checking coolant temperature sender

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3
- Test box V.A.G 1598/18 or V.A.G 1598/22
- Hand multimeter V.A.G 1526 or multimeter V.A.G 1715
- Adapter set V.A.G 1594
- Current flow diagram

Test sequence

- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the engine must be running at idling speed.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 8 for the function "Read measured value block" and confirm entry with Q key.

-> Indicated on display:

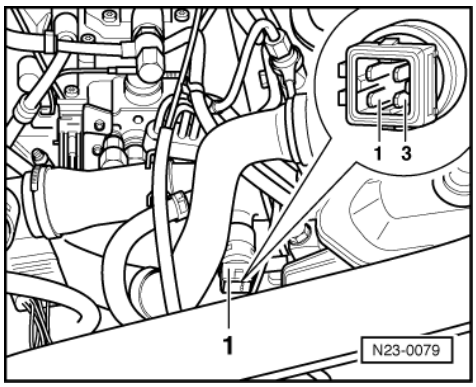
```
Read measured value block     HELP
Input display group number XXX
```

- Press keys 0, 0 and 7 for "Display group number 7" and confirm entry with Q key.
- ->

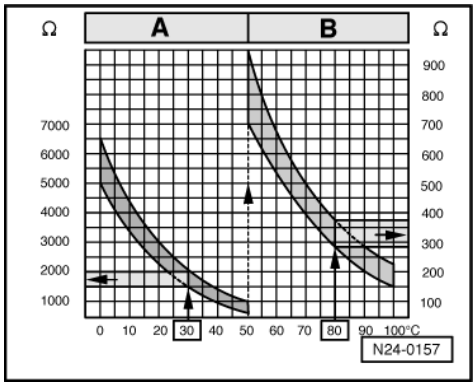
```
Read measured value block 7
15.4 5C          15.9 5C     16.7 5C
```

  Indicated on display:
- Observe coolant temperature figure in display zone 4. The temperature figure must
  Increase uniformly and without interruption.
- In case of faults the fuel temperature is displayed as a substitute.
- If no realistic display appears in display zone 4 or the fuel temperature is displayed as a substitute. Check coolant temperature sender and wiring connections to sender as follows:
- Press the ⇒key.
- Press keys 0 and 6 for the "End data transfer" function and confirm input with the Q key.
- Switch off ignition.

Protected by copyright. Copyright by Volkswagen AG. Copying for private or commercial purposes, in whole or in part, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document.
satelettronica



- -> Pull connector off coolant temperature sender -1-.
- Measure resistance between sender contacts 1+3.



-> Specification see diagram

Scale A shows resistance values for temperature range 0...50 °C and scale B the values for temperature range 50...100 °C.

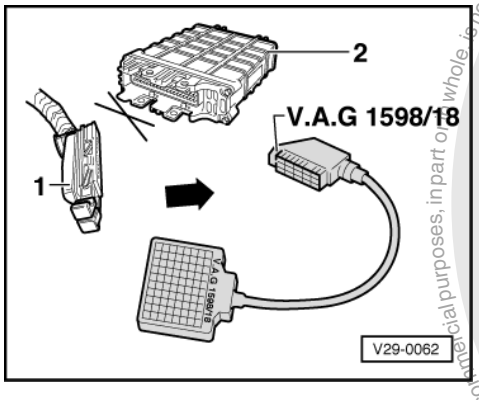
Examples:

- 30 °C corresponds to a resistance from 1500...2000 ω
- 80 °C corresponds to a resistance from 275...375 ω

If the specification is not obtained:

- Replace coolant temperature sender (G62).

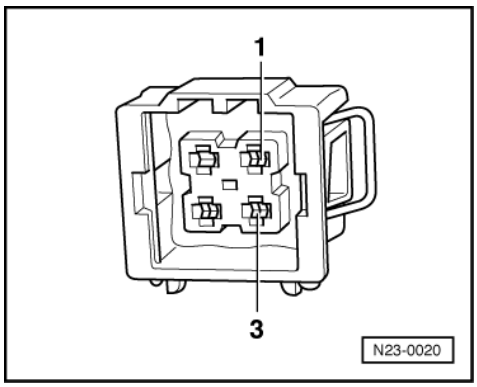
If the specification is obtained:



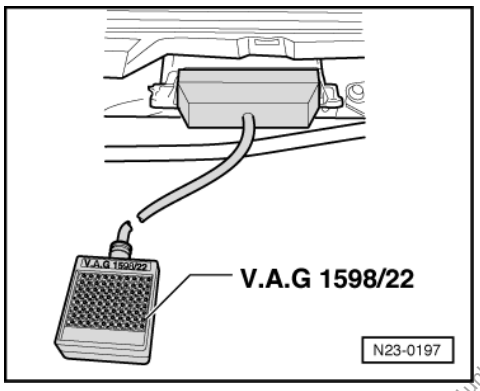
Vehicles with 68-pin control unit

- -> Connect test box V.A.G 1598/18 to control unit wiring loom.

satelettronica
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

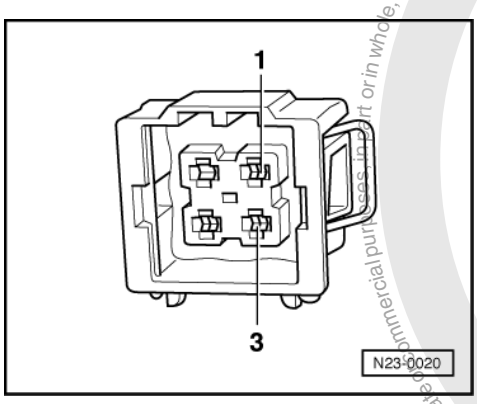


- -> Check wiring between test box and 2 pin connector for open circuit according to current flow diagram.
  Contact 3+ socket 14
  Contact 1+ socket 33
  Wire resistance: max. 1.5 ω
- Additionally check wires for short to one another, to vehicle earth and to battery positive.
  Specification: ∞ω



Vehicles with 80-pin control unit

- -> Connect test box V.A.G 1598/22 to control unit wiring harness.



- -> Check wiring between test box and 2 pin connector for open circuit according to current flow diagram.
  Contact 3+ socket 54
  Contact 1+ socket 70
  Wire resistance: max. 1.5 ω
- Additionally check wires for short to one another, to vehicle earth and to battery positive.
  Specification: ∞ω

Continued for all vehicles

If no wiring fault is detected:

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- Renew Diesel direct injection system control unit (J248) => Page 117 .

2.6 - Checking brake light switch and brake pedal switch

Because the injection system operates with an accelerator pedal sender (potentiometer) which may be defective, the engine is regulated for reasons of safety when the brakes are operated. To do this the control unit requires signals from the brake light switch and also the brake pedal switch. This means that if the brakes are operated when the accelerator pedal is held at a constant position the engine is immediately reduced to idling speed. Incorrectly adjusted switches may lead to unrequired regulating action

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3
- Test box V.A.G 1598/18 or V.A.G 1598/22
- Hand multimeter V.A.G 1526 or multimeter V.A.G 1715
- Adapter set V.A.G 1594
- Current flow diagram

Test sequence

- Connect the fault reader V.A.G 1551 (V.A.G 1552) and with ignition switched on select engine electronics control unit with the "Address word" 01.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 8 for the function "Read measured value block" and confirm entry with Q key.

-> Indicated on display:

```
Read measured value block      HELP
Input display group number XXX
```

- Press keys 0, 0 and 6 for "Display group number 6" and confirm entry with Q key.
- Observe display in display zone 2.

-> Specification: 0 0 0

```
Read measured value block 6
0 km/h     0 0 0      000000     255
```

- Operate brake pedal slowly.

-> Specification: 0 1 1
Both displays must change from 0 to 1 at same time.

```
Read measured value block 6
0 km/h     0 1 1      000000     255
```

  - Centre display = Brake pedal switch
  - Right-hand display = Brake light switch

  If no change takes place: adjust brake pedal switch switch point by turning the switch or adjust brake light switch point by moving the plunger.

- If one or both of the displays do not change from 0 to 1. Check switches or wiring connections to switches as described in the following.

Checking brake pedal switch (F47)

- Press the ⇒key.
- Press keys 0 and 6 for the "End data transfer" function and confirm input with the Q key.

Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. - -> Check wiring between test box and connector for open circuit using current flow diagram.
  Contact 1+socket 28
  Contact 2+socket 9
  Wire resistance: max. 1.5 ω
- Additionally check wires for short to one another, to vehicle earth and to battery positive.
  Specification: ∞ω

Checking brake light switch (F)

- Press the ⇒key.
- Press keys 0 and 6 for the "End data transfer" function and confirm input with the Q key.
- Switch off ignition.
- Set multimeter scale to measure voltage and connect between test box sockets.

Vehicles with 68-pin control unit:
Socket 1+44

Vehicles with 80-pin control unit:
Socket 1+20

- Observe voltage display.
  Specification:
  Brake pedal not depressed: 0 Volt
  Brake pedal depressed: approx. battery voltage

No voltage is displayed:

- Check whether brake light functions.

satelettronica

Brake light OK:

- Check wiring to brake light switch for open/short circuit according to current flow diagram.

=> Current flow diagrams, Electrical fault finding and Fitting locations binder

Brake light not OK:

- Replace brake light switch (F).

2.7 - Checking clutch pedal switch

The clutch pedal switch (F36) informs the control unit when the clutch is being engaged or disengaged. This prevents the engine from jolting when disengaging and engaging and also prevents the engine from racing during disengaging operations when the cruise control system is switched on.

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3
- Test box V.A.G 1598/18 or V.A.G 1598/22
- Hand multimeter V.A.G 1526 or multimeter V.A.G 1715
- Adapter set V.A.G 1594
- Current flow diagram

Test sequence

- Connect the fault reader V.A.G 1551 (V.A.G 1552) and with ignition switched on select engine electronics control unit with the "Address word" 01.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 8 for the function "Read measured value block" and confirm entry with Q key.

-> Indicated on display:

```
Read measured value block     HELP
Input display group number XXX
```

- Press keys 0, 0 and 6 for "Display group number 6" and confirm entry with Q key.
- Observe display in display zone 2.

-> Specification: 0 0 0

```
Read measured value block 6
    0 km/h     0     0     0     000000
255
```

- Operate clutch pedal. The left-hand position must change to 1.

-> Specification: 1 0 0

```
Read measured value block 6
    0 km/h     1     0     0     000000
255
```

If the specifications are not obtained:

- Press the ⇒key.
- Press keys 0 and 6 for the "End data transfer" function and confirm input with the Q key.

If no wiring fault is detected:

- Renew Diesel direct injection system control unit (J248) => Page 117 .

2.11 - Checking modulating piston movement sender and quantity adjuster

The metering unit is an electro-magnetic swivelling positioner which is controlled by the control unit via a directed duty cycle (on-off ratio). The eccentric shaft on the metering unit moves the modulating piston on the high pressure piston and thereby regulates the quantity of fuel injected.

The modulating piston movement sender informs the control unit of the position of quantity adjuster -N146 and therefore stipulates the amount injected.

Test sequence

- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the engine must be running at idling speed.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 3 for the function "Final control diagnosis".

-> Indicated on display:

```
Rapid data transfer      Q
03 Final control diagnosis
```

Note:

The individual control elements are only activated for 30 seconds. Within this period various work sequences must be carried out with the fault reader unit as well as reading the measured values. Therefore read the following work sequence first to become conversant with the procedure.

- Confirm input with Q key.

-> Indicated on display:

```
Final control diagnosis
Commencement of injection valve -N108
```

- Press C key.
- Press keys 0 and 8 for the function "Read measured value block" and confirm entry with Q key.

-> Indicated on display:

```
Read measured value block      HELP
Input display group number XXX
```

- Press keys 0, 0 and 4 for "Display group number 4" and confirm entry with Q key.

-> Indicated on display:

```
Read measured value block 4
840 rpm     0.95 BTDC     0.95 BTDC     3
%
```

The displays in display zones 3 and 4 must fluctuate within following control range:

Engine codes AEY, AHB

- Specification display zone 3
  lower range 1°ATDC...5.0°BTDC
  upper range 14.0...17.4°BTDC
- Specification display zone 4
  lower range 2...5%
  upper range 90...95%

Because the fault reader display is slow the displayed figures vary greatly. Therefore ensure that in display zone 3 the lowest figure lies between 1.0 and 5.0 and the highest figure lies between 14.0 and 17.4 and in display zone 4 the lowest figure lies between 2 and 5, and the highest figure lies between 90 and 95.

Engine code AHU

- Specification display zone 3
  lower range 1°ATDC...4.0°BTDC
  upper range 14.0...17.4°BTDC
- Specification display zone 4
  lower range 2...5%

Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document.

upper range 90...95%

Because the fault reader display is slow the displayed figures vary greatly. Therefore ensure that only in display zone 3 the lowest figure lies between 1.0 and 4.0 and the highest figure lies between 14.0 and 17.4 and in display zone 4 the lowest figure lies between 2 and 5, and the highest figure lies between 90 and 95.

Continued for all engine codes

If the specifications are not obtained:

- Check commencement of injection valve => Page 106 .

Engine codes AFN, AKW, ALE

Checking the function of the exhaust gas recirculation is undertaken in function 04 (Basic settings). Using this procedure the exhaust gas recirculation valve is pulsed so that the extremity values for advanced (early) and retarded (late) positions for the timing device can be read in measured value block 004, display zone 3.

Test sequence

- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the engine must be running at idling speed.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 4 for the function "Introduction of basic setting" and confirm entry with Q key.

-> Indicated on display:

```
Basic setting      HELP
Input display group number XXX
```

- Press keys 0, 0 and 4 for "Display group number 4" and confirm entry with Q key.

-> Indicated on display:

```
System in basic setting          4
    820 rpm     advanced     7.95 BTDC
47%
```

Specification display zone 3:
Engine codes AFN, ALE 6.5...9.5° BTDC
Engine code AKW 7...9° BTDC

After approx. 10 seconds the timing device is moved to the retarded (late) position.

-> Indicated on display:

```
System in basic setting          4
    820 rpm     retarded     4.45 BTDC
32%
```

Specification display zone 3:
Engine codes AFN, ALE 2.5...5.5° BTDC
Engine code AKW 3...5° BTDC

If the specifications are not obtained:

- Press the ⇒key.
- Press keys 0 and 6 for the "End data transfer" function and confirm input with the Q key.
- Switch off ignition.

satelettronica

2.15 - Checking exhaust gas recirculation and air mass meter function

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3
- Test box V.A.G 1598/18
- Hand multimeter V.A.G 1526 or multimeter V.A.G 1715
- Adapter set V.A.G 1594
- Current flow diagram

Engine code AHU

Engine codes AFN, ALE =>Page 113

The exhaust gas recirculation and air mass meter function can be checked with the help of final control element test and at the same time calling-up measured value block 003. To do this the control element Exhaust gas recirculation (EGR) valve -N18 must be activated and then exit the final control element test with -C- key. Using this sequence the EGR valve continues to be pulsed so that with the help of the measured value block 003 (display zone 3) the extreme values for the EGR (air mass meter) can be read.

Test sequence

- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the engine must be running at idling speed.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 3 for the function "Final control diagnosis".

-> Indicated on display:

```
Rapid data transfer      Q
03 Final control diagnosis
```

Note:

The individual control elements are only activated for 30 seconds. Within this period various work sequences must be carried out with the fault reader unit as well as reading the measured values. Therefore read the following work sequence first to become conversant with the procedure.

- Confirm input with Q key.

-> Indicated on display:

```
Final control diagnosis
Commencement of injection valve -N108
```

- Press the ⇒key.

-> Indicated on display:

```
Final control diagnosis
Exhaust gas recirculation valve -N18
```

- Press C key.
- Press keys 0 and 8 for the function "Read measured value block" and confirm entry with Q key.

-> Indicated on display:

```
Read measured value block      HELP
Input display group number XXX
```

satelettronica
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

- Press keys 0, 0 and 3 for "Display group number 3" and confirm entry with Q key.

```
Read measured value block 3     "
840 rpm     272 mg/H     268 mg/H     54 %
```

-> Indicated on display:

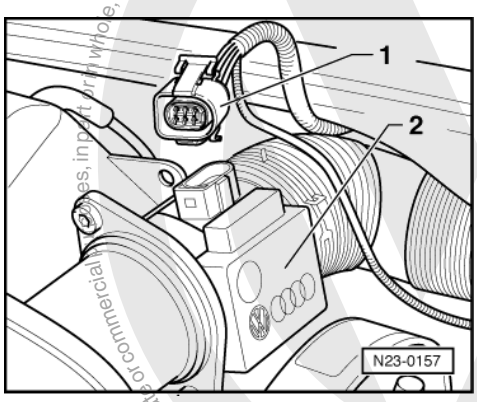
The displays in display zones 3 and 4 must fluctuate within following control range:

- Specification display zone 3
  Lower range 230...310 mg/stroke
  Upper range 360...480 mg/stroke
- Specification display zone 4
  Lower range 2...5%
  Upper range 90...95%

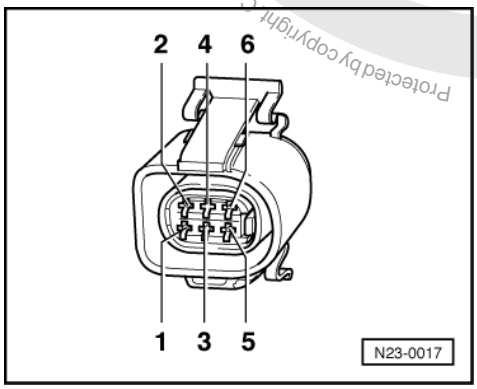
Because the fault reader display is slow the displayed figures vary greatly. Therefore only ensure that the upper and lower range figures in display zones 3 and 4 are obtained. This means only regard the minimum or maximum values.

If the specifications are not obtained:

- Check air mass meter as follows:
- Press the ⇒key.
- Press keys 0 and 6 for the "End data transfer" function and confirm input with the Q key.



- Switch off ignition.
- -> Pull connector -1- off air mass meter -2-.
- Switch on ignition.



- -> Measure air mass meter voltage supply between following connector contacts:

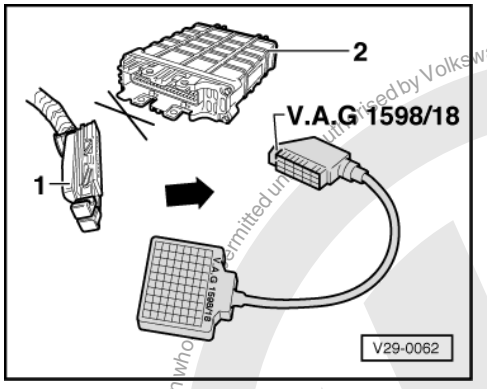
Connector on -G70 contact	Specification
3 + Earth	App. battery voltage
3 + 5	App. battery voltage
1 + earth	Approx. 5 V

Protected by copyright. Copyright by Volkswagen AG.
Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document.
satelettronica

Connector on -G70 contact	Specification
1 + 5	Approx. 5 V

If the specifications are not obtained:

- Switch off ignition.



- -> Connect test box V.A.G 1598/18 to control unit wiring loom.
- Check wiring between test box and connections for open circuit according to current flow diagram.
  Contact 1+ socket 19
  Contact 2+ socket 33
  Contact 3+ socket 23
  Contact 5+ socket 1
  Contact 6+ socket 13
  Wire resistance: max. 1.5 ω
- Additionally check wires for short to one another, to vehicle earth and to battery positive.
  Specification: ∞ω

If the specifications are obtained:

- Check exhaust gas recirculation:

=> Repair group 26; Exhaust gas recirculation system, engine codes AFN, AHU, ALE; Checking exhaust gas recirculation Exhaust gas recirculation system, engine codes AFN, AHU, ALE Checking exhaust gas recirculation

If no fault is detected on the air mass meter and the exhaust gas recirculation system:

- Renew Diesel direct injection system control unit (J248) => Page 117 .

Engine codes AFN, ALE

Checking air mass meter

The air mass meter signal is used by the control unit to calculate the quantity injected and to control the required exhaust gas recirculation. The smaller the signal from air mass meter the smaller the quantity of fuel injected.

Test sequence

- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the engine must be running at idling speed.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

Warning! Secure fault reader to rear seat and operate from this position.

-> Indicated on display:

satelettronica

```
Rapid data transfer      HELP

```

- Press keys 0 and 8 for the function "Read measured value block" and confirm entry with Q key.

-> Indicated on display:

```
Read measured value block      HELP
Input display group number XXX
```

- Press keys 0, 1 and 0 for "Display group number 10" and confirm entry with Q key.
- Observe display in display zone 1.

```
Read measured value block 10
309 mg/H     1027 mbar     1011 mbar     0.0 %
```

-> Specification: 230...420 mg/H

If the specification is not obtained:

- Check exhaust gas recirculation:

=> Repair group 26; Exhaust gas recirculation system, engine codes AFN, AHU, ALE; Checking exhaust gas recirculation Exhaust gas recirculation system, engine codes AFN, AHU, ALE Checking exhaust gas recirculation

If the specification is obtained:

- Accelerate vehicle in 2nd gear from about 1500 rpm using full throttle.
- Press PRINT key on V.A.G 1551 at approx. 3000 rpm. The accelerator pedal must be fully depressed at this moment in time.

```
Read measured value block 10
830 mg/H     1027 mbar     1850 mbar     100 %
```

-> Specification in display zone 4: 100 % (accelerator pedal position)

If the specification is not obtained:

- Repeat test and accelerate vehicle at full throttle.
- ->

```
Read measured value block 10
830 mg/H     1027 mbar     1850 mbar     100 %
```

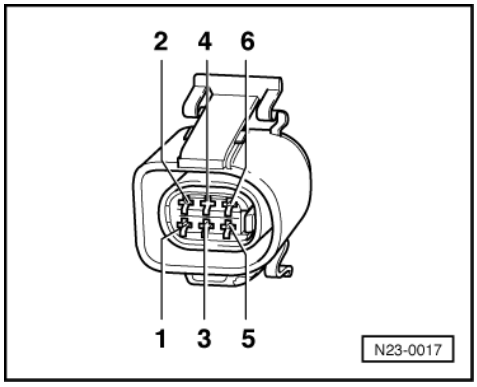
Specification in display zone 1: above 750 mg/H (mass of air drawn in).

If the specification is not obtained:

- Renew air mass meter.

If a constant 550 mg/H (predetermined replacement value) is displayed in display zone 1.

- Press the ⇒key.
- Press keys 0 and 6 for the "End data transfer" function and confirm input with the Q key.
- Switch off ignition.
- Disconnect connector for air mass meter
  =>Fitting locations overview, Page 46 .
- Switch on ignition.



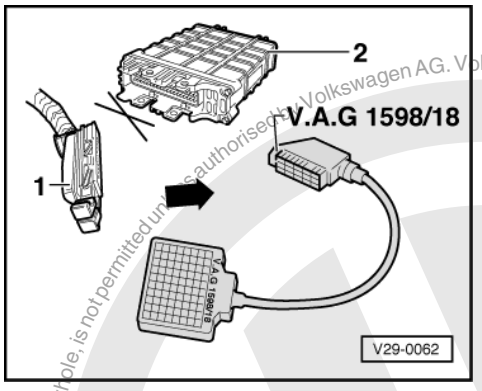
satelettronica

- -> Measure air mass meter voltage supply between following connector contacts:

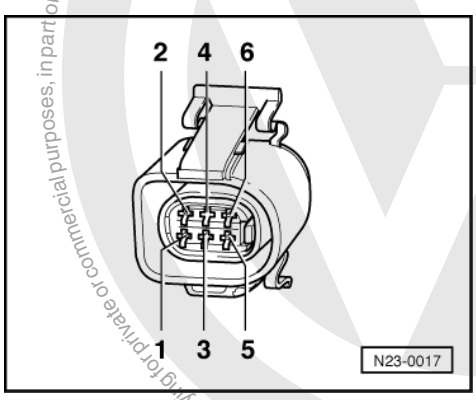
Connector on -G70 contact	Specification
3 + Earth	App. battery voltage
3 + 5	App. battery voltage
1 + earth	Approx. 5 V
1 + 5	Approx. 5 V

If the specifications are not obtained:

- Switch off ignition.



- -> Connect test box V.A.G 1598/18 to control unit wiring loom.



- -> Check wiring between test box and connections for open circuit using current flow diagram.
  Contact 1+ socket 19
  Contact 2+ socket 33
  Contact 3+ socket 23
  Contact 5+ socket 1
  Contact 6+ socket 13
  Wire resistance: max. 1.5 ω
- Additionally check wires for short to one another, to vehicle earth and to battery positive.
  Specification: ∞ω

satelettronica

Note:

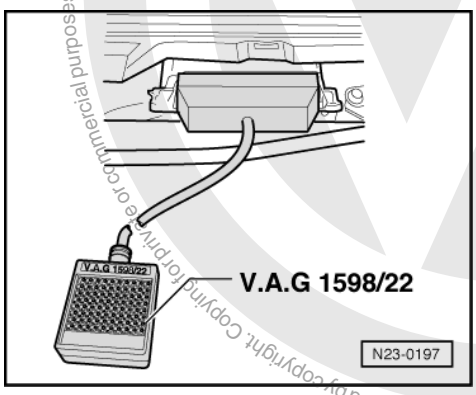
If necessary, hold the front right wheel to prevent it from turning.

If the display does not fluctuate:

- Check wiring to speedometer or to speedometer sender.

=> Current flow diagrams, Electrical fault finding and Fitting locations binder

Vehicles with 80-pin control unit



- -> Connect test box V.A.G 1598/22 to control unit wiring harness.
- Bridge sockets 1+33 with auxiliary cables from V.A.G 1594.
- Connect diode test lamp between socket 1 (earth) and socket 51 (speed signal).
- Switch on the ignition and turn the front left wheel by hand.

Note:

If necessary, hold the front right wheel to prevent it from turning.

- The diode test lamp must flash (approx. four times per wheel rotation).
- If the diode test lamp does not flash, check wiring from engine control unit connector contact 51 to dash panel insert for open/short circuit.

=> Current flow diagrams, Electrical fault finding and Fitting locations binder

3 - Replacing, coding and matching engine control unit

3.1 - Replacing, coding and matching engine control unit

3.2 - Replacing engine control unit

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- Fault reader V.A.G 1551 with cable V.A.G 1551/3

Work sequence

- First print out the control unit identification and thereby the previous control unit coding as follows:
- Connect fault reader V.A.G 1551 (V.A.G 1552) and select the engine electronics control unit with the "address word" 01
  => Page 2 ; Connecting fault reader and selecting engine electronics control unit.

```
028906021DL 1.9l R4 EDC G00SG 0828
Coding 00002     WSC XXXXX
```

satelettronica

-> Press Print key of fault reader for control unit identification print-out (example).
- Press ⇒key.
- Press keys 0 and 6 for the function "End output" and confirm entry with the Q key.

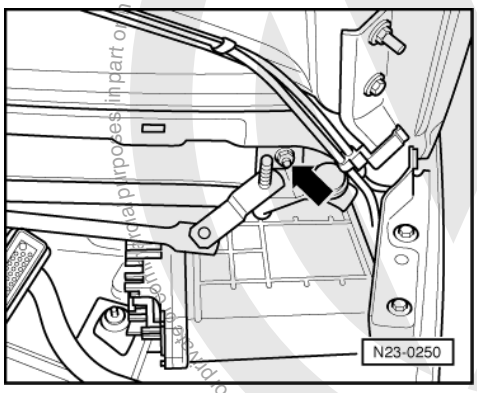
-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Switch off ignition.
- Remove plenum chamber cover.

=> General body repairs; Repair group 66; Trim; Removing and installing plenum chamber cover Trim Removing and installing plenum chamber cover

- Pull vacuum hose off control unit.
- Release and pull off control unit connector.



- -> Remove control unit bracket and take out old control unit with bracket.
- Before installing exchange engine control unit, note part number.
- Install new control unit with bracket.
- Check the previous coding and Part No. of the old control unit and code the exchange control unit according to table => Page 118 .

- If the vehicle is equipped with a cruise control system (CCS) (recognised by a G before gearbox version, e.g. G00SG) then this must be activated on exchange engine control unit.

=> Current flow diagrams, Electrical fault finding and Fitting locations binder

- Match engine control unit to the electronic immobilizer => Page 120

3.3 - Coding engine control unit

There are control units which must not be coded (engine control unit MSA12) and control units which must be coded (engine control unit MSA15).

If the appropriate code for the vehicle is not displayed or if the control unit has been renewed, the control unit must be coded as follows.

Warning!
Always display the the control unit identification first and print out if necessary.
emissions.

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3

Protected by copyright. Copyright by Volkswagen AG.
Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

For training purposes only.
satelettronica

Work sequence

- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the ignition must be switched on.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

Control unit identification of MSA12

-> If the fault reader V.A.G 1551 displays this control unit identification, then the control unit must not be coded (example):

```
028906021C      1.9 ltr.      R4      EDC
SG      D..
Coding 0000      WSC0000
```

- There are no zeros in front of the type of gearbox (MG or AG).
- The software version begins with a letter.

Externally the MSA12 can be recognised by the plastic housing.

Control unit identification of MSA15

-> If the fault reader V.A.G 1551 displays this control unit identification, then the control unit must be coded (example).

```
028906021DF 1.9l R4 EDC G00SG 0602
Coding 00002      WSC XXXXX
```

- There are two zeros in front of gearbox version (SG or AG) or G if the vehicle is equipped with a cruise control system (CCS).
- The software version is made up of a 4 digit number, e.g. 0602 or a capital letter-number combination, e.g. KD02.
- The display KDxx means that the engine control unit is an exchange engine control unit. See engine control unit print-out for coding to be entered.

Externally the MSA15 is recognised by the aluminium housing.

- Press ⇒key.

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 7 for the function "Code control unit" and confirm entry with Q key.

-> Indicated on display:

```
Code control unit        Q
Input code number xxxxx (0-32000)
```

Coding when replacing a MSA 12 engine control unit with a MSA 15 engine control unit

- Code the exchange engine control unit MSA15 according to table.

Example:

Part number of old control unit MSA12:
- 028 906 021 CJ

Part number of exchange control unit MSA15:
- 028 906 021 HA

Coding of exchange engine control unit MSA15:
- 00002

1 - Checking glow plug system

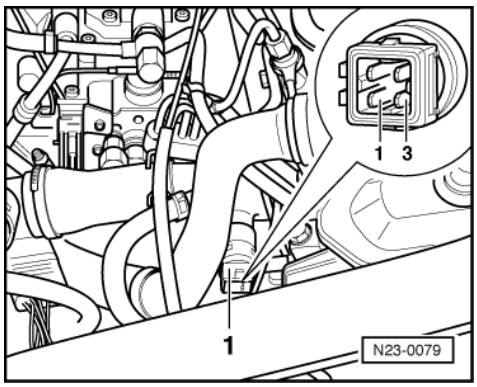
1.1 - Checking glow plug system

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- Hand multimeter V.A.G 1526
- Adapter set V.A.G 1594

Test conditions

- Battery voltage at least 11.5 V
- Ignition switched off
- Diesel direct injection system control unit (J248) OK.
- Glow plug strip fuse (S 39) OK.



Test sequence

- -> Pull connector off coolant temperature sender -1-.

Note:

Pulling the connector off sender, simulates engine condition "cold" and when switching the ignition on the relevant glow period is carried out.

- Pull glow plug connector off glow plug.
- Connect multimeter to measure voltage between a glow plug connector and vehicle earth.
- Switch on ignition for approx. 20 seconds
  approx. battery voltage
  must be displayed.
- If no voltage is present:

=> Current flow diagrams, Electrical fault finding and Fitting locations binder

1.2 - Checking glow plugs

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- Diode test lamp V.A.G 1527

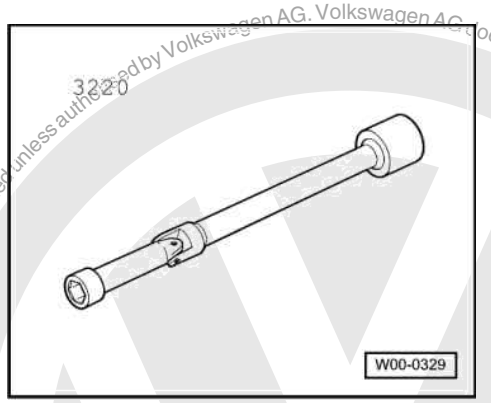
satelettronica

- Adapter set V.A.G 1594



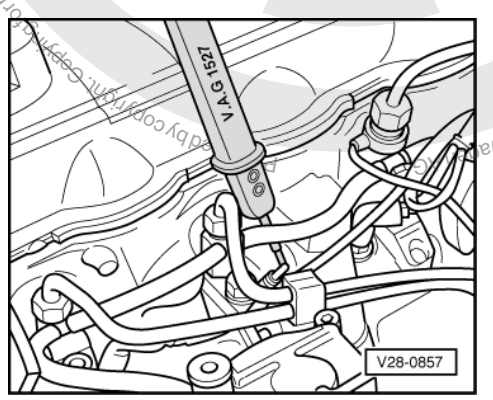
- -> 3220 Jointed socket
- Torque wrench V.A.G 1331 (5...50 Nm)

Test conditions

- Battery voltage at least 11.5 V
- Ignition switched off

Test sequence

- Pull glow plug connector off glow plug.



- -> Connect diode test lamp wire using auxiliary clips from auxiliary cable set to battery positive (+).
- Place diode test lamp probe on each glow plug one after the other.
  Diode lights up: glow plug OK.
  Diode does not light up: replace glow plug.
- Remove and install glow plugs with jointed spanner 3220
  Tightening torque: 15 Nm.
